AI-Powered PMO Portfolio Prioritization

Comprehensive End-User Guide & Operational Walkthrough

Microsoft Fabric OneLake • LightGBM + SHAP • Direct Lake Power BI • Ionic Angular

1. Executive Portfolio Overview

The Overview dashboard synthesizes real-time metrics, LightGBM machine learning tier distribution, data quality confidence, and cross-functional workforce capacity.

2. Multi-Device Layout Optimization

The solution adapts responsively across Desktop browsers, Tablets (touch-optimized), and Smartphones with zero loss of capability.

3. Prioritization Board & Table

Enables portfolio managers to visualize projects categorized by priority tier, sort by multi-signal rank, and inspect high-density data matrices.

4. Organizational Hierarchy & Rollups

Inspects portfolio allocations through an expandable Business Unit > Site > Project tree with cost and confidence rollups.

5. Power BI Direct Lake Executive Analytics

Delivers zero-copy direct lake analytics over OneLake Gold delta tables with scatter quadrant matrices and budget distribution.

6. Quick Add with AI Prefill

Business sponsors input plain-English proposals or choose sample prompts, allowing Azure OpenAI to extract the 10 canonical PMO signals automatically.

7. Direct Data Entry & Ingestion Sources

Provides unified project forms and a dashboard monitoring the 11 enterprise connectors in OneLake Bronze and Silver layers.

8. PMO Human Governance Audit Log

Enforces human governance over AI recommendations with audit trails recording approvals, adjustments, and rejections.

9. Project Deep Dive & SHAP Feature Drivers

Inspects individual projects with confidence ring breakdowns, SHAP importance waterfalls, and Rule R1-R5 audit badges.

10. AI Portfolio Copilot & Multi-Format Exports

The floating action button (FAB) activates the Copilot chat drawer, providing sample prompt chips, table-to-chart switches (Bar, Line, Pie, Radar), and exports to Word, Excel, and PowerPoint.
